

Disaster Recovery as a Services

Technology Associates offers Disaster Recovery as a Service (DRaaS) to safeguard your mission-critical IT systems. With our DRaaS solution, you can have peace of mind, knowing that your systems will remain accessible in the event of a disaster.

Our expert Disaster Recovery Consultants will assess your infrastructure and help determine which systems need protection and at what frequency, taking into consideration your budget and specific requirements.

Our dedicated DR implementation team will then configure a customized DR site for you in our Private Cloud, without any upfront capital costs. This allows for a seamless and cost-effective implementation of your disaster recovery solution.

At Technology Associates, our DRaaS solutions are tailored to your needs and do not require you to make changes to your existing infrastructure or business processes. This ensures a smooth integration and minimizes disruption to your operations.

By leveraging our expertise and advanced technology, you can ensure the availability and continuity of your critical IT systems, providing resilience and protection for your business.

Pricing Model

Monthly with no Fixed-term contract

Supported Configurations

Physical Servers

Single Point of Contact (SPOC): Our Managed IT Services provide you with a dedicated SPOC, enhancing reliability, response time, and time to resolution. This streamlined communication channel ensures efficient handling of your IT issues.

Comprehensive Server Protection: We offer robust protection for your physical servers, as well as virtualization platforms like VMware and Hyper-V. This ensures the security and integrity of your critical data and applications.

Fully Managed Solution: Our services are fully managed, meaning we take the time to understand your specific requirements and tailor a solution that aligns with your unique business needs. This personalized approach ensures optimal performance and efficiency.

Regular Testing and Reporting: We conduct regular testing and provide detailed reporting to ensure the effectiveness and readiness of your IT infrastructure. This proactive approach helps identify and address any vulnerabilities or potential issues before they become major problems.

Disaster Recovery and Failback: In the event of a disaster, our solutions allow for failback to your primary site without data loss or prolonged downtime. This ensures minimal disruption to your business operations and helps you get back up and running quickly.

Offline Seeding and Bandwidth Optimization: To reduce bandwidth requirements, we offer offline seeding, allowing for efficient data transfer. This minimizes the impact on your network resources while ensuring seamless backups and recovery processes.

Trained Technicians for Recovery: Our technicians are trained in disaster recovery protocols and assist in the recovery process. Their expertise ensures a smooth and efficient restoration of your systems and data.

Managed Firewall Included: As part of our service, we provide a Managed Firewall at no additional charge. This adds an extra layer of security to your network infrastructure, protecting your data and systems from unauthorized access.

Our Managed IT Services encompass these features to provide you with a comprehensive, reliable, and secure solution for your IT infrastructure needs.
